

# BLANCO® Sink Care & Maintenance

## BLANCO® GRANITE COMPOSITE SINKS

### How to clean your SILGRANIT sink

SILGRANIT sinks are fade, stain, chip and scratch-resistant, making them very easy to clean. However, like any heavy-duty kitchen fixture— they may show traces of wear over time. For a daily clean, mix water with soap and scrub gently with a sponge. Be sure to dry off the sink when you're finished, this will prevent surface stains and water spots from forming.

### How to remove stains from a SILGRANIT sink?

Stubborn stains can be removed by pouring a little warm vinegar or vinegar-based cleaner into the sink and allowing it to sit for a few minutes. Rinse with clean water and dry.

Food stains – depending on the severity of the stain, use a bleach water solution or pour the bleach onto a cloth and cover the stain. Allow the bleach to sit for at least 1/2 hour and then clean with dish detergent and water.

### How to deep clean a SILGRANIT sink?

You can use dishwasher tablets for deep cleaning: fill 1–3 cm of hot water into the bowl, dissolve a tablet overnight. In the morning, scrub with scotch-brite nylon pad and thoroughly rinse with dish soap and water. Magic eraser will also help in removing stubborn stains.

### How to get rid of scuff marks on a SILGRANIT sink?

Scrubbing marks with baking soda and water with the rough side of a sponge will remove

most stains and scuff marks leftover from pots and pans. Keep applying baking soda and a bit of water as you continue to scrub - you may need to scrub hard for several minutes, but most marks can be lifted this way!

## **Restrictions for SILGRANIT sinks.**

**DO NOT** use strong abrasive cleaners, metal scrub pads or steel wool. These will scratch and dull the surface of the sink.

**DO NOT** pour paint in your sink. The chemicals in acrylic paint will react with SILGRANIT sinks if allowed to sit over 24 hours and will produce permanent marks.
