

# Cleaning and Care

## SWANSTONE GRANITE COMPOSITE SINKS

Daily cleaning with soap (such as Dawn) and water using a Scotch Brite pad.

Dry sink with a dry soft cloth to remove water spots.

To remove stains or surface scratches, use the pad and a light coat of Bar Keepers Friend or Soft Scrub.

Rinse with water.

To remove calcium deposits, use 50% white vinegar and 50% water on a cloth and let it sit on affected area for at least 20 minutes, then scrub with pad. Repeat if necessary.

To bring back original surface luster, clean sink as above, rub canola or vegetable oil on complete sink and allow to soak overnight. Next use as is or rinse off excess oil with warm water.

You may use any granite polish daily on your sink to keep it sparkling.
